Question 1: What is async function?

Student's Answer:

A. An async function always returns a promise. If we return a value instead of a promise, it will take this value, wrap it inside a promise, and then return it.

Correct Answer:

The async function always return a promise. If we return a value instead of promise it will take this value wrap it inside a promise and then return it.

How do we convert a promise into data?

We use then() method; dataPromise.then((res) => console.log(res));

Marks Awarded: 4.0 out of 5

Feedback: Your answer is mostly correct, but you missed the part about converting a promise into data using the then() method.
